

LF Energy SEAPATH TSC

09th July 2026

Antitrust Policy Notice

Linux Foundation meetings involve participation by industry competitors, and it is the intention of the Linux Foundation to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas, and be aware of, and not participate in, any activities that are prohibited under applicable US state, federal or foreign antitrust and competition laws.

Examples of types of actions that are prohibited at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy available at linuxfoundation.org/antitrust-policy. If you have questions about these matters, please contact your company counsel, or if you are a member of the Linux Foundation, feel free to contact Andrew Updegrove of the firm of Gesmer Updegrove LLP, which provides legal counsel to the Linux Foundation.

Agenda

- Drop of CEPH-ansible, Debian 12 and Yocto Scarthgap support [Eloi Bail - SFL]
 - Voting
- Roadmap update [all actions leaders + Nicolas Plantis - SFL]
 - Informations & Actions
- SEAPATH annual Review [Eloi Bail – SFL]
- LFE Summit [Eloi Bail SFL + Nicolas Plantis SFL]
 - Agenda & Practical information
- News from the LFE Marketing Group [Nicolas Plantis - SFL]

Drop of CEPH-ansible, Debian 12 and Yocto Scarthgap support

Vote by TSC Voting members

- RTE: Bastien Desbos
- GE Vernova: David Macdonald
- Savoir-faire Linux: Eloi Bail
- Schneider: Camille Bloch
- Welotec: Jan Hille

Roadmap update

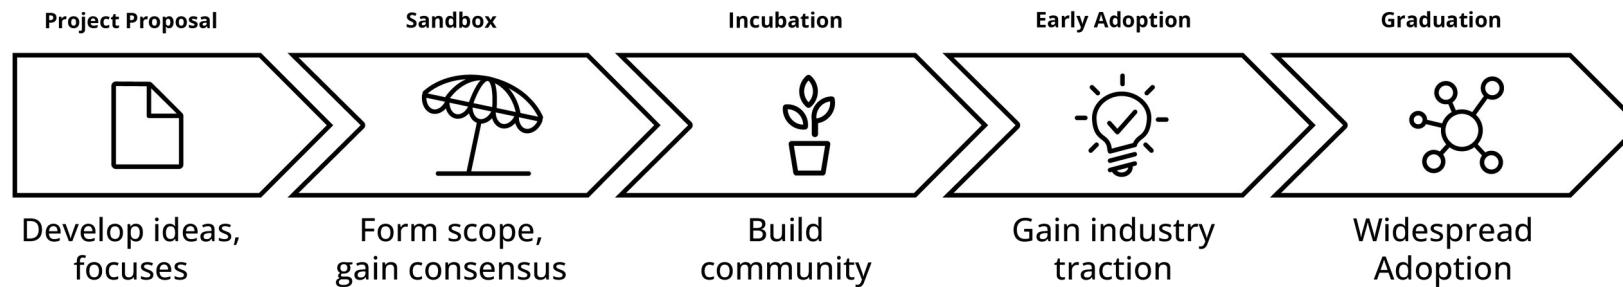

- Some actions have already been initiated, thank you!
 - Action 1.1: TSC Evolution / Governance (KOM planned on July 10th)
 - Action 1.2: Demonstration platform + Sandbox (KOM hold on July 9th)
 - Action 1.7 Release Weekly / Daily
 - Action 2.5: Use documentation as a code
 - Action 3.1: Develop supervision tool of the virtualization infra for maintenance purposes

Roadmap update

- Want to get involved? 12 actions do not have leader (especially related to SEAPATH Maintenance)
- Tooling :
 - Action tracking
 - [Klaxoon Board](#)
 - New section dedicated to updates
 - Communication to Action Leaders : via a dedicated ML (on-going)
- Feel free to contact Nicolas Plantis (nicolas.plantis@savoirfairelinux.com) if you need support on the organization

SEAPATH annual Review

- Annual review of the project the 21th July by Eloi on Technical Advisory Council (TAC) meeting
- LF Energy SEAPATH is at « Early adoption » stage since January 2023

More details on <https://tac.lfenergy.org/process/lifecycle.html>

SEAPATH annual Review

- **Benefits of Early Adoption stage**
 - An initial strategy meeting with the project leadership and the LF Energy staff to define the actions and activities to support the project's growth plan.
 - More marketing, communication, and PR support, including major and minor announcements.
 - Events support and promotion, both at LF Energy hosted events and potentially other events (pending funding approval).
 - Support and funding for a CI/CD environment.
 - The ability for the project to develop a conformance program and training program to support downstream adoption

SEAPATH annual Review

- **Move of SEAPATH to graduated stage ?**
- **Acceptance Criteria**
 - Achievement of the OpenSSF Best Practices badge at the 'Gold' level.
 - Have fulfilled or are on track to complete the growth plan defined in the Early Adoption stage proposal.
 - Have a healthy number of contributions or committers from at least three organizations, with any single organization not composing more than 50% of the contributions or committers. Committers must be identified within the project in a COMMITTERS file.
 - Have a public list of project adopters for at least the primary repo (e.g., ADOPTERS.md or logos on the project website).
- **Benefits**
 - ▶ A voting representative from the project on the TAC.
 - ▶ Regular strategic planning meetings with the project leadership and the LF Energy staff to define the actions and activities to support the project.
 - ▶ Access to discretionary budget for supporting project-specific outreach and ecosystem development activities, subject to approval by the Governing Board.
 - ▶ Advanced marketing/communication/PR support that includes project promotion via blog posts, social media, and LF Energy website; support with white papers and posters, and any marketing collateral designated to promote the project

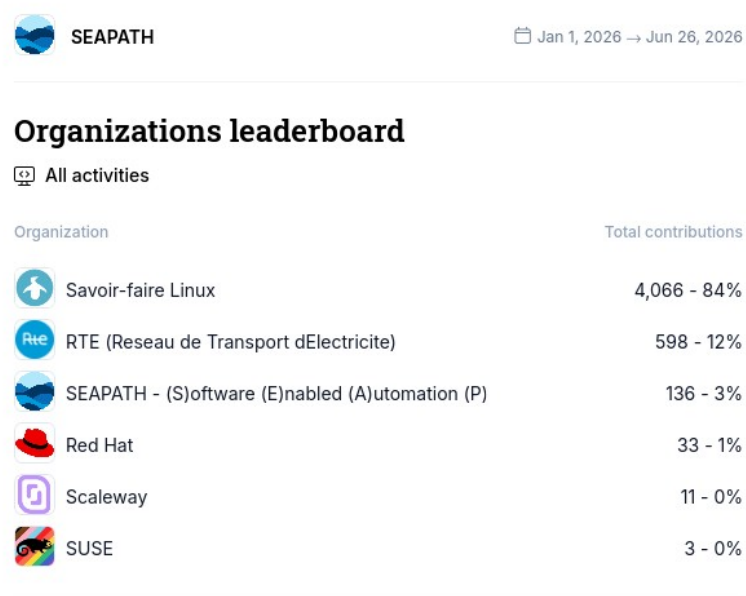

SEAPATH annual Review

1- Achievement of the OpenSSF Best Practices badge at the ‘Gold’ level, 4 uncompleted tasks:

Category	Title	Description
Change Control	Public version-controlled source repository	The project MUST clearly identify small tasks that can be performed by new or casual contributors. (URL required) [small_tasks] This identification is typically done by marking selected issues in an issue tracker with one or more tags the project uses for the purpose, e.g., up-for-grabs, first-timers-only, "Small fix", microtask, or IdealFirstBug. These new tasks need not involve adding functionality; they can be improving documentation, adding test cases, or anything else that aids the project and helps the contributor understand more about the project.
	Coding standards	The project MUST document its code review requirements, including how code review is conducted, what must be checked, and what is required to be acceptable. (URL required) [code_review_standards] See also two_person_review and contribution_requirements.
	Working build system	The project MUST have at least 50% of all proposed modifications reviewed before release by a person other than the author, to determine if it is a worthwhile modification and free of known issues which would argue against its inclusion [two_person_review] The project MUST have a reproducible build. If no building occurs (e.g., scripting languages where the source code is used directly instead of being compiled), select "not applicable" (N/A). (URL required) [build_reproducible] A reproducible build means that multiple parties can independently redo the process of generating information from source files and get exactly the same bit-for-bit result. In some cases, this can be resolved by forcing some sort order. JavaScript developers may consider using npm shrinkwrap and webpack OccurrenceOrderPlugin. GCC and clang users may find the -frandom-seed option useful. The build environment (including the toolset) can often be defined for external parties by specifying the cryptographic hash of a specific container or virtual machine that they can use for rebuilding. The reproducible builds project has documentation on how to do this.
	Automated test suite	The project MUST have FLOSS automated test suite(s) that provide at least 90% statement coverage if there is at least one FLOSS tool that can measure this criterion in the selected language. [test_statement_coverage90] The project MUST have FLOSS automated test suite(s) that provide at least 80% branch coverage if there is at least one FLOSS tool that can measure this criterion in the selected language. [test_branch_coverage80]

SEAPATH annual Review

- 2- Have a healthy number of contributions or committers from at least three organizations, with any single organization not composing

SEAPATH annual Review

- 3- more than 50% of the contributions or committers. Committers must be identified within the project in a COMMITTERS file.
 - Could be easily added
- 4- Have a public list of project adopters for at least the primary repo (e.g., ADOPTERS.md or logos on the project website).
 - Could be easily added

LFE Summit – Sept 15th-16th - Berlin

Agenda is live !

- 12 talks/demo related to SEAPATH
- 1 dedicated meetup

Tuesday Sept 15th	Demo by RTE of VIP'R R&D Project: Protecting a 63 kV Substation on SEAPATH with Multi-Vendor Solutions	Maxime Pelletier (RTE)
	Getting Started With SEAPATH: Faster Onboarding for New Users	Eloi Bail (Savoir-faire Linux), Mathieu Dupré (Savoir-faire Linux)
	Open Source at the Edge: SEAPATH Is Now Fully Enabled on SUSE	Jurriën Bloemen (SUSE), Eloi Bail (Savoir-faire Linux)
	Selectivity as Code: Closing the Loop Between PowSyBI and SEAPATH	Aurélien Watore (RTE International), Nevena Popović (RTE International South East Europe)
	Connecting LF Energy's Projects: A Mini City Prototype for the Digital Grid Ecosystem	Darshan Chawda (Hitachi Ltd.), Nao Nishijima (Hitachi Ltd.)

LFE Summit – Sept 15th-16th - Berlin

Wednesday Sept 16th	Protecting a 63 kV Substation on SEAPATH with Multi-Vendor Solutions by RTE and Schneider Electric	Maxime Pelletier (RTE), Hervé Bigeard (Schneider Electric)
	Enabling VIED Compatibility on SEAPATH: The SSC600SW Integration Journey	Aurelian Pop (ABB), Erwann Roussy (Savoir-faire Linux)
	Accelerating Grid Digitalisation With Linux-based SEAPATH and Qualcomm Dragonwing	Jean-Jacques Adragna (Qualcomm), Eloi Bail (Savoir-faire Linux)
	Pre-Packaging CRA and NIS2 Compliance: The SEAPATH Approach	Mathieu Dupré (Savoir-faire Linux)
	Building a Multi-Vendor Software-Defined Substation: Lessons from Red Hat's vPAC Demonstrator	Daniel Schaefer (Red Hat)
	One Measurement Layer, Many Virtual Substation Functions: RTE and EcoPhi's 400/225 kV Digital Substation	Ebrahim Balouji (EcoPhi)
	Open Substation: Building an Open Stack for Digital Substations	Guillaume Tucker (gtucker.io)
Thursday Sept 17th	SEAPATH Meetup / Workshop	Meetup
